Press Release

March 2011, Volume 38

Contents of this issue

Dear Customers, Dear Friends of Brain Products,

we at Brain Products care greatly about even the tiniest details of our products. We truly believe that it is not sufficient merely to provide you with a functioning system. In our view, our products must be both good AND user-friendly. That is why I am very happy to inform you that a new version of the actiCAP ControlBox is now available.

The new design of the ControlBox II makes it extremely easy to replace or add electrodes, which was a tedious chore with the ControlBox I.

Electrodes are no longer permanently attached to the ControlBox as in the previous version. All you have to do now to add or replace electrodes is to plug them into the connectors located on the front panel of the actiCAP ControlBox II. After rebooting, the number of electrode sets connected to the actiCAP system will automatically be detected by the ControlBox.

Using the ControlBox II requires actiCAP ControlSoftware 1.2.2.0, which can be downloaded gratis from our website (http://www.brainproducts.com/downloads.php?kid=8&tab=4). The previous version of the ControlBox is also compatible with actiCAP ControlSoftware 1.2.2.0.

Customers ordering on or after March 15, 2011 will automatically be sent the new actiCAP ControlBox.

Naturally, existing actiCAP customers can upgrade their ControlBox I to a ControlBox II for a very modest exchange fee. Please contact either us or your local dealer for more information.
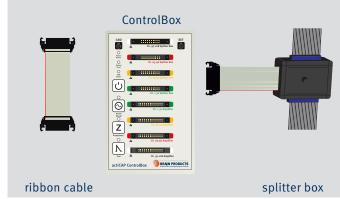

Please note that you will need to send back the complete actiCAP system to upgrade your ControlBoxes.

We hope you will enjoy reading this issue of our Press Release!

Pierluigi Castellone
Brain Products' CEO

ControlBox Version I

ControlBox Version II, ribbon cable for the connection to the amplifier (connectors on the lower part of the ControlBox) and splitter box with actiCAP electrodes (connectors on the upper part of the ControlBox).
